💻 GitHub: github.com/MatthewSalam

Technical Skills

Frontend: HTML, CSS, JavaScript, React, Next.js, Tailwind

Backend: Python (FastAPI)

Databases: MySQL, PostgreSQL, SQLite

Tools: Git, GitHub, Version Control

Soft Skills: Teamwork, Time Management

Projects

Multi-User Authentication Dashboard | Frontend Developer |

Technologies: HTML5, CSS3, JavaScript (ES6+), Local Storage, Session Storage

Developed a frontend authentication system supporting multiple user accounts with secure login flows and personalized dashboards. Implemented client-side validation, session-based state management, and responsive UI components to enhance usability and interaction.

Live: https://ui-three-bice.vercel.app/

Weather Web Application | Frontend Developer |

Technologies: HTML, CSS, Tailwind CSS, JavaScript, React, Next.js

Built a responsive frontend web application that integrates a third-party weather API to display real-time weather data for cities worldwide. Implemented dynamic city search, asynchronous API requests, error handling, and responsive layouts to ensure a smooth and reliable user experience. Demonstrated strong frontend fundamentals and API integration skills.

API: OpenWeatherMap

GitHub: https://github.com/MatthewSalam/weatherX

Live: https://weather-x-seven.vercel.app/

Fellowship Management API | Backend Developer |

Technologies: Python, FastAPI, SQLAlchemy, JWT, bcrypt, PyJWT

Designed and developed a RESTful backend API to manage church fellowship operations, including member registration, authentication, and administrative data handling. Implemented secure password hashing and token-based authentication, following clean backend architecture principles with scalable CRUD operations and maintainable project structure.

Databases: MySQL, SQLite

GitHub: https://github.com/MatthewSalam/RCF-OAU-API

Inventory Management System | Full-Stack Developer |

Frontend Technologies: HTML5, CSS3, JavaScript (ES6+), React, REST API Consumption

Backend Technologies: Python, FastAPI, SQLAlchemy, SQLite, bcrypt, PyJWT

Built a full-stack inventory management system with a responsive frontend for viewing and managing inventory records, and a backend API handling complete CRUD operations. Implemented persistent data storage, secure authentication, and clean RESTful architecture, demonstrating end-to-end client–server integration.

Allocatr – Hostel Allocation & Clearance System | Full-Stack Developer |

Frontend Technologies: Next.js 15, React, Tailwind CSS, Axios, BarcodeDetector API, Sonner

Backend Technologies: Python, FastAPI, PostgreSQL, SQLAlchemy, PyJWT, HMAC

Built a full-stack hostel management system for Nigerian universities with three role-based dashboards (Student, Officer, Admin). The frontend features a QR code clearance flow where students display HMAC-secured QR codes that officers scan in-browser to record departmental clearance, a

smart polling system that detects status changes without unnecessary refetches, and an admin panel for running a First-Come First-Served room allocation algorithm with CSV/PDF export. The backend exposes a secure REST API with JWT authentication, FCFS allocation logic, and HMAC-signed QR verification.

EDUCATION

Adeleke University, Ede (September 2022 - July 2026)

BSc Computer Science (Software Engineering) - July 2026

Relevant Coursework: Operating Systems, Web and mobile design/development.

EXPERIENCE

Anettcomm Technologies - Intern

February 2025 - August 2025

Roles

- Assisted in web design and development tasks
- Built and tested applications in Python(FastAPI)
- Designed digital flyers/posters with Canva
- Collaborated in team projects, reporting and time management
- CMS development using WordPress
